

Key Capabilities

HAW engineers and fabricates the critical process systems behind Green Hydrogen production. From separation and purification to storage, process equipment and modular skids, we deliver reliable, project-specific solutions built for seamless integration.

Hydrogen Separation Skids

Design, support and fabrication of hydrogen separation systems, including:

- Hydrogen separation skids
- Gas-liquid separation systems
- Knock-out drums and separators
- Process piping and manifolds
- Skid-mounted process packages
- Utility and auxiliary systems

Hydrogen Purification Skids

Fabrication and integration of purification systems designed to achieve the required hydrogen purity for downstream applications.

- Hydrogen purification skids
- Gas purification packages
- Dryer packages
- Filtration systems
- Gas conditioning systems
- Skid-mounted purification units

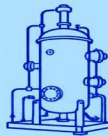

Hydrogen Storage Systems

HAW offers fabrication solutions for hydrogen storage infrastructure, subject to applicable design codes, material requirements and project specifications.

- Hydrogen storage vessels and tanks
- Buffer vessels
- High-pressure storage systems
- Intermediate storage systems
- Associated piping and manifolds
- Modular storage packages

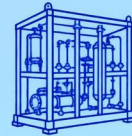

Process & Separation Equipment

Our fabrication capabilities extend to critical process equipment required across Green Hydrogen and downstream applications:

- Pressure vessels
- Separators and Receivers
- Knock-out drums
- Process and Storage tanks
- Gas-liquid separation equipment
- Customised process equipment

Modular Skid Packages

We provide pre-assembled modular skids, enabling faster site installation and improved project quality.

- Our modular approach can cover:
- Hydrogen process skids
- Purification and Separation skids
- Utility skids
- Gas conditioning packages
- Balance-of-Plant packages
- Customised process modules

H₂

Building the Green Hydrogen Revolution.

Building on decades of engineering and fabrication expertise, HAW is helping shape the infrastructure behind Green Hydrogen.

Together with Greenzo Energy India Limited, a specialist in electrolyser technology, HAW brings integrated engineering, equipment and project solutions to **every stage of the process**:

The HAW Promise

From concept to commissioning, HAW brings engineering, procurement, fabrication and execution together as **one integrated platform**, giving clients a single, dependable partner for Green Hydrogen projects.

Integrated Solution

Single-window EPC partner for a seamless experience.

Proven Expertise

Decades of engineering and fabrication expertise across industries.

Advanced Manufacturing

State-of-the-art facilities and quality processes.

Cost Effective

Optimised design and execution for better performance.
